(Westlake)

Do you suffer from pain?
Have you been told surgery
is your only option? There's a
better alternative...

Services

Non-surgical regenerative treatments for pain associated with sports injuries, arthritis and other musculoskeletal conditions

At QC Kinetix (Westlake), our clinicians, doctors, and joint care professionals treat thousands of people living silently with non-specific joint pain for years. Some turn to powerful prescription painkillers that can be harmful in the long term, while some think that costly and painful surgical procedures are their only option. When looking online for alternative hip replacement and knee surgery, it's easy to believe that only temporary solutions for pain relief exist for conditions like rheumatoid and bursitis. Our QC Kinetix physicians are proud to practice in a relatively new medical field called regenerative medicine, based on decades of medical advances in ways to trigger your body to mobilize its self-healing mechanisms. The regenerative medical researchers developed therapies that are especially effective for joint pain treatment and capable of producing long-lasting results. If you have been suffering from joint pain for a long time, you may be interested in learning more about regenerative medicine. If so, we encourage you to contact sports medicine in Westlake today!
